

REDACTION.IE

🎯 Track and
blur any person,
any object in any video.

Where images of parties appear on CCTV footage the onus lies on the data controller to pixelate or otherwise redact the images before supplying a copy of the footage to the requestor

REDACTION.IE is a dedicated,
GDPR COMPLIANT video redaction service.

Which provides clients with a simple process to blur out faces or objects while meeting the data protection guidelines for access video requests.

Access video requests can arise from any number of reasons.

A fall on a premises, a road traffic incident, theft from retail, to a site security breach in the construction industry.

All these request must be handled in a sensitive and GDPR compliant manner.

Lets look at an example.

Body cam footage is presented of an incident which includes 1 individual, and 2 bystanders. The two bystanders are identifiable in the footage. As a part of an access video request, those uninvolved must be redacted from the footage.

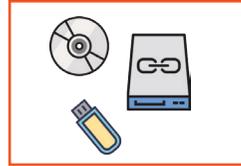

Once the redaction is complete, the footage can then be safely shared to the principle's involved or any third party such as a solicitor or law firm.

THE PROCESS

Footage can be supplied to Redaction as physical media or via secure FTP transfer.

Once the footage has been received, along with an outline of the incident.

PHYSICAL MEDIA

FTP TRANSFER

It is reviewed by a member of our team of experts and based on our experience in the process of anonymisation we supply a quote.

Each access video request is assigned to a individual privacy technician. Who working with our data protection officer, identifies and tracks the subjects within the footage and processes the redaction.

It is our policy is that all data is processed and verified by trained professionals in a secure closed loop environment.

After the redaction has taken place and the client is satisfied with the finished result, the footage is removed from our secure servers and a **GDPR compliant audit trail is produced.**

THE AUDIT TRAIL

The audit trail details the arrival of the footage on site, the review process, the actions carried out on the footage and by whom. And finally confirms the destruction of the data once the process is complete.

This audit trail, relating to your redacted footage, **meets all the data protection guidelines for access video requests.**
